This office action is in response to the decision rendered by the Board of Patent Appeals and Interferences dated 6/19/2006.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James L. Clingan, Jr. on 8/1/2006.

The application has been amended as follows:

Claims 14 and 16 have been amended.

Claim 14 is amended to read as follows:

An apparatus integrated to provide a hash value of a variable length message in

accordance with a first algorithm and a second algorithm, comprising:

a register file (12) having five registers preset to a first group of values for the first

algorithm and to a second group of values for the second algorithm, the register

file storing first (B), second (C), third (D), fourth (E) and fifth (A) chaining

variables;

Art Unit: 2131

a function circuit (22) receiving first, second and third chaining variables and generating, as an output of the function circuit, a first logical data value for the first algorithm and a second logical data value for the second algorithm;

a storage element (34, 36) for supplying a first set of constant values for the first algorithm and a second set of constant values for the second algorithm; and

a summing circuit (30) having a first input coupled to the output of the function circuit (22) and a second input coupled to the storage element for receiving one of the first and second sets of constant values.

Claim 16 is amended as follows:

The apparatus of claim 15, wherein the register array further includes:

an exclusive-OR (116) coupled for simultaneously receiving first, second, third and fourth data words stored in the plurality of registers and for generating data; and

a rotate block (118) having an input coupled to an output of the exclusive-OR and supplying a one bit left circular shift of the data generated by the exclusive-OR to one of the registers in the plurality of registers.
